

Data4 appoints Isabel Fernández Polo as Head of Global Neocloud, leading the AI and GPU sales team

Madrid, April 21st, 2026 – [Data4](#), European leader in the data centre sector, has announced the appointment of **Isabel Fernández Polo as Head of Global Neocloud**, where she will lead the AI and GPU sales team, a position she will assume **in addition to her current role as Head of Sales in Spain**.

This new role will be key to driving Data4's expansion and strengthening its position as a benchmark partner for neoclouds in Europe, offering data centre campuses prepared for high density and artificial intelligence workloads in strategic markets such as France, Spain, Italy, Germany, Greece, and Poland.

In collaboration with Adam Levine, Chief Commercial Officer of Data4, Isabel will be responsible for defining and executing the Group's global commercial strategy in this area, supporting sales initiatives, and managing relationships with both global and regional neocloud clients.

With this appointment, the company seeks to accelerate its global strategy, increase its market penetration, and consolidate long-term commercial agreements, positioning Data4 as a preferred provider for Cloud and AI infrastructure in Europe.

With a degree in Business and Law from the University of Comillas (ICADE) and a PDD from IESE Business School, Isabel has a solid track record at companies such as Microsoft, Oracle and Google Cloud, , which gives her a deep knowledge of the technology and data centre ecosystem.

In the words of **Adam Levine, Chief Commercial Officer** of Data4, *"We are delighted that Isabel is expanding her responsibilities within the organization. Her knowledge of the sector and her experience will be fundamental to expanding our global reach, continuing to drive our strategy in the neocloud segment, and supporting the growth of our clients throughout Europe."*

About Data4

Data4 is a major European operator and investor in the data centre market. The Group finances, designs, builds and operates its own data centres. Data4 Group has pioneered an ultra-connected, resilient and sustainable data centre campus model, with the aim of supporting its customers' digital growth over the long term by providing them with scalable and secure hosting solutions for their IT servers, ranging from a single rack to a dedicated building. The Group is committed to a proactive approach to sustainable development through its Data4 Good program, which is based on 4 main pillars: environment, people, community and governance. Data4 Group operates some of the most powerful data centre campuses in Europe, with land and electricity reserves that are unique on the European market. Data4's data centres in France, Italy, Spain, Poland, Germany and Greece are home to international cloud operators and major telecoms providers, as well as innovative tech companies and multinationals.
